TURBO TIMER FOR NISSAN X-TRAIL

We are pleased to advise that the latest model **Nissan X-Trail** with turbo diesel engine, released in February 2009, can be fitted with our **plug-in** type turbo timer model **925/PATH**. It is suitable for both the TS and TL Nissan models. Our **Application Guides** have been updated with this addition.

GLOW PLUG TIMER MODELS - DGT-1 & DGT-2

With the arrival of colder weather, the demand for our glow plug timers has increased. There are **2 models** available, each designed to suit different applications and vehicle types.

Model **DGT-1** is designed for applications employing pre-glow & after glow systems where a voltage dropping resistor or after glow is already present in the vehicle.

The **DGT-2** model is for applications where glow plug after glow is not provided & is required, or where the existing after glow system is damaging the plugs.

It provides a single output, which is constant voltage during pre-glow, but switches to **pulsed output** for after glow.

The pulsed output (typically 2 seconds on - 2 seconds off) doesn't allow the plugs to reach full heat during the on period nor full cold during the off period.

This reduces stress on the glow plugs while generating heat to aid cold engine running.
